

# ATTENTION!!!

This airport lays in the National Park : “Messolonghi - Aetoliko Lagoons and Acheloos - Evinos Delta Area”, which is part of the NATURA 2000 network of European Protected Areas. It is also included in the official list of the RAMSAR- Convention Wetlands. It is also specially protected through the KYA 22306/ΦΕΚ 477 Δ’/ 31-5-2006 Ministerial Decision.

More than 250 species of birds, many of which are rare and threatened, survive in this protected area. A special research showed that they are seriously disturbed if aircrafts fly lower than 1.000 ft.

**That minimum height (1000 ft.), above the protected area, has been imposed by a special legislation concerning the operation of our airport and should be strictly kept.** Apart from this legal obligation we must respect the fact that the aerial space of the park is a vital habitat of these birds and that we are just guests in it.

So, let us show our love and respect to those wonderful creatures.

The president of the Messolonghi Air-Club

Georgios Prevezanos
